Thrust Under

Runway excursion after loss of thrust at low speed

The runway excursion was caused by prolonged asymmetric thrust, due to the loss of thrust on engine #4 at low speed The loss of engine thrust was caused by a compressor stall The only way to arrest a deviation resulting from asymmetric thrust below the speed at which the rudder becomes effective, is to promptly retard the thrust levers to idle

BURIED PIPE CALCULATIONS - adpf

Thrust Block Unbalanced thrust forces occur in pipelines at changes in direction (elbows, wyes, tees, etc), at changes in cross sectional area (reducers) or at pipeline terminations These forces, if not adequately restrained, may cause pipeline movement resulting in separated joints and/or pipe damage
